다음과 같이 Sigmoid function이 주어졌을 때, $\frac{\partial \hat{y}}{\partial z}$ 를 구하라.

$$\hat{y} = \sigma(z) = \frac{1}{1 + e^{-z}}$$

1)
$$\frac{d\hat{y}}{d\hat{z}} = \frac{d}{d\hat{z}} \left(\frac{1}{1+e^{-z}} \right) = \frac{d}{d\hat{z}} \left(1+e^{-z} \right)^{-1} = -\left(1+e^{-z} \right)^{-2} \frac{d}{d\hat{z}} \left(1+e^{-z} \right)$$

$$= -\left(1+e^{-z} \right)^{-2} \left(\frac{d}{d\hat{z}} + \frac{d}{d\hat{z}} \right) = -\left(1+e^{-z} \right)^{-2} \frac{d}{d\hat{z}} \left(e^{-z} \right)$$

$$= \left(1+e^{-z} \right)^{-2} e^{-z} = \frac{e^{-z}}{\left(1+e^{-z} \right)^{2}} = \frac{1}{\left(1+e^{-z} \right)} \cdot \frac{e^{-z}}{\left(1+e^{-z} \right)}$$

$$= \frac{1}{1+e^{-z}} \cdot \left(1 - \frac{1}{1+e^{-z}} \right) = \delta(z) \left(1 - \delta(z) \right) = \hat{y} \left(1 - \hat{y} \right)$$
